

APP BUILDING VIRTUAL WORKSHOP

Thank you so much for your support in signing up for an Inventors & Makers virtual workshop. We hope your child enjoys their workshop with us this week!

We love seeing children get creative and find they are often excited to talk about what they have done after the workshop. We've provided the information below to help you understand their learning and give you some ideas for following up.

WHAT WE WILL LEARN

What an app is and the sorts of things apps are used for.

How to design screens for apps, including colour choices and themes.

How to build a wireframe of a simple app using the Marvel app.

FOLLOW UP IDEAS

Finish the app wireframes they built during the workshop, adding colour and other pages if they like.

User test the app with family members and then iterate by improving the app.

Design a logo and app name.

Design a new app to solve a real problem they identify and apply everything we learnt to build a wireframe of this app.
