

STOP MOTION ANIMATION VIRTUAL WORKSHOP

Thank you so much for your support in signing up for an Inventors & Makers virtual workshop. We hope your child enjoys their workshop with us this week!

We love seeing children get creative and find they are often excited to talk about what they have done after the workshop. We've provided the information below to help you understand their learning and give you some ideas for following up.

WHAT WE WILL LEARN

What stop frame animation is.

How to use the Stop Motion Studio app.

Movie making terminology and important aspects of the filmmaking process.

How to create your own short movie at home.

FOLLOW UP IDEAS

- **Reflect** on the short movie created with a family member, considering what worked well and what they may change next time.
- Add additional **sound** or dialogue.
- Write and make a **different movie**. Can they include new characters or a new setting?
- Design and make a **set** out of junk modelling for the movie they made or for a different movie. They could even make different sets and make a longer movie, or even shoot outside!
- If they used real toys as **characters**, try using playdough or card and paper to create characters. A lego character could also be made to walk by moving their arms and legs.
